SUMMARY

Full-stack engineer who builds web products with React, Node.js, and Python. Experienced with REST APIs, PostgreSQL, WebSockets, and AI integration using LLMs & RAG. Shipped a mentorship platform serving 100+ users in my hometown.

SKILLS

Languages & Databases: Python, JavaScript, SQL, Bash, PostgreSQL

Frameworks & Libraries: React, Vite, Node.js, Express, Django, Flask, REST APIs, WebSockets, RAG

Cloud & DevOps: GCP, Vercel, DigitalOcean, Jenkins, CI/CD, Git, GitHub, Linux

Soft Skills: Collaboration, Analytical Problem Solving, Agile/Scrum Methodology

PROJECTS

MyTownTutor (Mentorship Marketplace) - Django REST, React/Vite, PostgreSQL, Brevo, 100+ users

- Launched a full-stack mentorship marketplace serving 100+ organic users in my hometown, Django REST + React/Vite, 30+ endpoints, 7 models, PostgreSQL, deployed on DigitalOcean Server with Nginx.
- Designed mentor onboarding with admin approval, status tracking, and in-app student-mentor messaging.
- Integrated email-OTP auth, role-based access (student/mentor/admin), and GDPR-compliant soft deletion.
- Engineered Brevo transactional emails, QR scan analytics, and an admin dashboard for user/inquiry management.

Jira Visualizer - Node.js, React, PostgreSQL, WebSockets, Jira API

- A real-time mind-mapping tool on Node.js/Express + React/Vite with parent-child node trees stored in PostgreSQL.
- Used JWT auth with bcrypt password hashing, signup/login flows, and protected API routes.
- Added live multi-user editing over WebSockets and node changes sync across all clients in the same room.
- Built a Jira export feature using the Jira REST API to push the mind map as linked epics, stories, and subtasks, keeping the parent-child structure. Frontend deployed on Vercel.

INDUSTRY EXPERIENCE

SAP (Budapest Office)

Sept 2025 – Present

Scripting and Automation Specialist Intern

Budapest, Hungary

- Phase 1: **DevOps** - Cloud Infrastructure Team
- Automated network audit evidence collection via SSH execution on routers, switches, and firewalls.
- Developed RESTful APIs to fetch data from CMDBs, Panorama, and monitoring tools, improving audit efficiency.
- Deployed and managed applications on Google Cloud Platform (GCP) ensuring scalability and reliability.
- Implemented CI/CD pipelines and scheduled workflows using Jenkins for automation and continuous monitoring.
- Phase 2: **AI** - Network Infrastructure Team
- Built a secure AI assistant using a RAG pipeline with LangChain, FAISS, and a locally hosted LLaMA 3.7B model.
- Engineered document retrieval pipelines to enable question answering over internal technical documentation.
- Refined system prompts and retrieval logic to improve answer relevance while keeping all data on-premise.

HUN REN National Energy Research Centre

Jun 2024 – Aug 2024

Research Intern

Budapest, Hungary

- Developed a machine learning CNN-based image analysis pipeline on 3,500+ microscopy images to extract nanoparticle morphology and material properties with validated metrics (MAE, RMSE).
- Built a Flask-based inference system with preprocessing (noise filtering, artifact rejection) enabling reproducible, batch automated materials analysis workflows.

EDUCATION

University of Debrecen

Aug 2022 - Jun 2026

BSc in Electrical Engineering, Debrecen, Hungary

GPA - 4.9/5.0
