github.com/shoebUnideb/

Summary

Software developer experienced in designing automated, self-healing infrastructure and scalable cloud systems working on Docker, Jenkins, Prometheus, and GCP. Proficient in (OOP) Python, automation, CI/CD pipelines, monitoring, and incident remediation to improve reliability and observability. Looking forward to join as Junior Developer in Private Cloud Products.

SKILLS

Languages/Software: Python, JavaScript, Bash, SQL

Developer Tools: Google Cloud Product (GCP), **Linux**, Git, Jenkins, Ansible, **OOP-Python**, Kubernetes, Docker

Soft Skills: **C1-English**, Collaboration, Analytical Problem Solving, Team work, Agile/Scrum Methodolgy, Kanban Boards

EXPERIENCE

SAP Sept 2025 – Present
Scripting and Automation Specialist Intern Budapest, Hungary

- Phase 1: **DevOps - Cloud Infrastructure Team**
- Automated network audit evidence collection via SSH execution on routers, switches, and firewalls.
- Developed **RESTful APIs** to fetch data from CMDBs, Panorama, and monitoring tools, improving audit efficiency.
- Deployed and managed applications on **Google Cloud Platform (GCP)** ensuring scalability and reliability.
- Implemented **CI/CD pipelines** and scheduled workflows using **Jenkins** for automation and continuous monitoring.
- Phase 2: **AI - Network Infrastructure Team**
- Built a secure **AI assistant** using a RAG pipeline with **LangChain**, **FAISS**, and a locally hosted **LLaMA 3.7B** model.
- Engineered document retrieval pipelines to enable question answering over internal technical documentation.
- Fine-tuned model responses to improve contextual relevance while maintaining strict **Data privacy** constraints.

HUN REN Energiatudományi Kutatóközpont Jun 2024 – Aug 2024
Research Intern Budapest, Hungary

- Developed a machine learning CNN-based image analysis pipeline on 3,500+ microscopy images to extract nanoparticle morphology and material properties with validated metrics (**MAE**, **RMSE**).
- Used **OOP concepts in Python** and built a **Flask**-based inference system with preprocessing (noise filtering, artifact rejection) enabling reproducible, batch automated materials analysis workflows.

PROJECTS

Enterprise Audit Evidence Automation & Orchestration Platform

- Built parameterized Python scripts integrating **Jira APIs** to automate fetching, processing, and exporting audit evidence across projects with configurable date ranges and structured **Cloud** storage.
- Developed a declarative **Jenkins** pipeline with scheduled runs, historical data handling, multi-project **orchestration**, and automated failure recovery via Jira ticket creation and email alerts.
- Implemented a production-ready system with environment-based configs (.env), secure credential management, execution state tracking, automated setup, and full documentation.

Automated Incident Detection & Self-Healing Infrastructure Platform

- Designed and deployed a self-healing infrastructure using **Docker**, **Prometheus**, and **Alertmanager** for automated monitoring and alerting.
- Complemented by a **Python-based** remediation engine integrating Docker CLI and **Ansible** to resolve container failures and disk threshold issues.
- Implemented event-driven incident response workflows, improving system reliability and reducing **MTTR**.

EDUCATION

University of Debrecen Aug 2022 - Jul 2026 (expected)
BSc in Electrical Engineering, Debrecen, Hungary GPA - 4.71/5.00
